

APEX EPEX - Day in the Life by Persona

Purpose

This guide shows how each core persona uses APEX across a full EPEX operating day:

- Dispatch Operator
- Power Trader
- Risk Manager
- Quant Developer
- Portfolio Manager

Primary workspace screens:

- `/workspace/dispatch`
- `/workspace/trading`
- `/workspace/risk`
- `/workspace/quant`
- `/workspace/portfolio`

Supplemental Europe screens:

- `/europe/market`
 - `/europe/portfolio`
 - `/europe/etrm`
-

05:00-08:00 Auction Context and Portfolio Setup

Dispatch Operator

- Opens `/workspace/dispatch` with market set to `EPEX`.
- Confirms asset and reserve service mappings for EPEX battery assets.
- Reviews predispach strip and latest model lineage marker.

Power Trader

- Opens `/workspace/trading`.
- Rotates through EPEX instruments (for example `DE-LU\_BASE`, `FR\_BASE`).
- Uses **Trade Blotter** + **Position Book** to evaluate overnight carry.

Risk Manager

- Opens `/workspace/risk`.
- Initializes VaR at current EPEX spot and verifies limits.
- Runs initial stress set to baseline downside risk envelope.

Quant Developer

- Opens `/workspace/quant`.
- Confirms EPEX model lineage freshness and run timestamp.
- Validates strategy availability for EPEX in strategy catalog.

Portfolio Manager

- Opens `/workspace/portfolio`.
 - Reviews annual revenue composition and PPA sensitivity baseline.
 - Confirms EPEX simulation defaults are loaded.
-

08:00-12:00 Intraday Positioning and Cross-Border Awareness

Dispatch Operator

- Tunes offer bands to reflect expected intraday profile.
- Uses recommendation confidence to guide charge/discharge scheduling.

Power Trader

- Tracks quoted instrument movement and MTM shifts.
- Uses exposure heatmap to reduce concentration risk by quarter bucket.

Risk Manager

- Recomputes VaR after material trade additions.
- Uses stress scenarios for volatility expansion and max-price conditions.

Quant Developer

- Correlates strip behavior with expected model output trajectory.
- Flags unusual residual behavior for post-session diagnostics.

Portfolio Manager

- Runs simulation what-if cases:
- higher reserve participation

- adjusted contracted MW
- extended duration assumptions
- Shares contribution deltas with trader/risk.

Europe Regional Screens (context augmentation)

- `/europe/market`: checks current EPEX prices and cross-border utilization.
 - `/europe/portfolio`: checks spark spread trend and legacy incumbent asset set.
 - `/europe/etrm`: runs REMIT audit simulation for compliance traceability.
-

12:00-17:00 Governance and Optimization Loop

Dispatch Operator

- Maintains offer stack traceability in stack history.
- Ensures final stack for each key asset is coherent with forecast conditions.

Power Trader

- Rebalances positions ahead of close.
- Confirms blotter and quote-consistency for key delivery zones.

Risk Manager

- Performs formal midday and pre-close risk control checks.
- Ensures utilization remains within approved thresholds.

Quant Developer

- Captures model behavior notes for retraining and drift monitoring.

Portfolio Manager

- Reviews benchmark rankings and PPA MTM changes.
 - Prepares next-day portfolio recommendations.
-

17:00-20:00 Close and Hand-off

Dispatch Operator

- Locks final stack configuration and logs rationale.

Power Trader

- Confirms end-of-day net position and unresolved execution items.

Risk Manager

- Publishes final VaR/limits snapshot for controls handoff.

Quant Developer

- Documents model exceptions and data quality concerns.

Portfolio Manager

- Publishes realized-vs-simulated commentary for next-day planning.
-

Operating Notes for EPEX

- Core market data dependency: ``apex_fresh.market_epex.prices``.
- Core trading dependency: ``apex_fresh.trading.trades`` (market = ``EPEX``).
- Forecast/lineage dependencies:
 - ``apex_fresh.analytics.price_forecasts``
 - ``apex_fresh.analytics.model_lineage``
- Portfolio dependencies:
 - ``apex_fresh.portfolio.revenue_rates``
 - ``apex_fresh.portfolio.simulation_defaults``
